No job too big or too small!

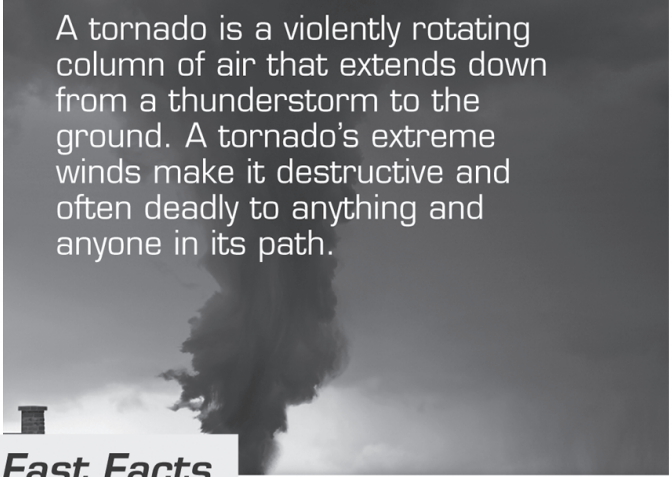

NF PBC
Continued from front page
Further, PBC Chair Mr. Don Kellogg added, “We have been trying to get this memorandum of understanding from the state, and it has been the understanding, based on conversations, that this project will be funded through the Department of Transportation, and so Tony has some concerns about any contractual requirements and document review by that agency.” He said that they are still waiting on confirmation of that and guidance on what that oversight will entail. All agreed that a special meeting could be held in the coming weeks if both of those points are resolved. There are some concerns about adhering to the ideal schedule, which would involve getting as much completed as possible before concrete plants close for the winter.
Schweitzer reported on the ongoing search for a solution to stop fire tanks from leaking at the elementary school, which has been an issue for several months. He explained that they are considering an idea first discussed at a PBC meeting two weeks ago, involving injecting the epoxy in the joint between and behind the link seals, then coating the area with hydraulic cement.
Regarding the legal matter surrounding the propane failures at the high school, Schweitzer said that the process was slowed a bit due to summer travel, but the Town’s attorney is planning for a meeting with O&G to attempt a resolution.
The next regular New Fairfield Permanent Building Committee meeting is scheduled for Tues., July 28, 7:30pm.

TORNADO AWARENESS

Fast Facts

- The strongest tornado wind speed on record is 318 mph (511 km/h), (with a 20 mph margin of error) at a height of 105 feet above the ground, according to The Weather Channel.*
- The fastest forward speed of a tornado officially recorded is 73 mph (117 km/h), according to The Weather Channel.*
- Tornadoes are measured using the Fujita scale (F-scale), with F5 being the strongest.
- Tornadoes may not be visible until they start carrying dust and debris.
- Tornadoes can move in any direction, although most move from southwest to northeast.
- Tornadoes can emit sounds that range from a dull roar to a hiss, whoosh, rumble or train-like blast.
- Tornadoes usually last less than 15 minutes.

Tornado Watch vs Tornado Warning

Prepare for a possible tornado:

- Check for forecast updates and monitor sky conditions.
- Determine where to take shelter. If you live in a mobile home or home without a basement, identify a safe building you can reach quickly.
- Review your emergency plan and check supplies

Take immediate action for an imminent tornado:

- Move to the basement, an interior room or closet away from windows and outside walls, or the lowest floor of a sturdy building.
- If you are in a vehicle, mobile home or outdoors, move to the closest substantial shelter.
- Check for wireless emergency alerts on your mobile phone, forecast updates and further information.
